

# Aboveground Piping System

# Aboveground Piping System

*Quickly Establish New and/or Temporary Dispensing Lanes*

Separation By Design, Inc. (SBD) has engineered a low cost, quick solution to setting up a new and/or temporary dispensing lane with its patented Aboveground Piping product. Save dramatically on EPA requirements and installation costs by piping aboveground rather than below.

Affectionately called the 'speed bump', SBD's aboveground piping also reduces risk by slowing vehicles as they approach your dispensing units.

## Cost Effective

SBD's aboveground piping is not only a fraction of the cost of in-ground piping, it offers annual savings as well.

- No annual underground line leak detection requirements.
- No EPA trench sampling required.
- No trenching or groundwork needed.
- Lower risk of accident due to high speed vehicles.

## Portable

Protect your long-term investment and give yourself the ability to quickly respond to changes in demand.

- Reconfigure your site as needed.
- Quickly add new dispensing lanes.
- Move piping to another site with shifts in demand.
- Honor restrictive lease requirements.
- Piping maintains its resell value.

## Product Specifications

### Standards & Approvals:

- Patent # US D654,153 S
- Rated for HS-20 axle load exposure
- Welding completed by AWS certified welders

### Operating Temperature:

- Standard: based on liquid properties
- With optional heating: ???

### Size & Dimensions:

- ?" width x ?" height x variable length

### Piping Chase:

- Outer: A-36 carbon steel
- Inner: A-500 grade steel square tube
- Painted safety yellow for visual identification

### Piping:

- A-106 B seamless steel pipe
- A-105 steel couplings
- Optional stainless steel pipe & couplings for Diesel Exhaust Fluid (DEF)

### Optional Heating & Insulation:

- Insulation: ????
- Heater wattage: ???

### Installation:

- Secures directly to concrete driveway
